# IS THIS WEIGHMENT SLIP GENUINE? SCAN IT.

Every slip printed by SMFW Weighment Software carries a **QR code**. You do not need an app. Open your phone's camera, point it at the QR, and tap the link.

## WHAT YOU WILL SEE

| RESULT | MEANING |
|---|---|
| **Genuine slip** with RST number, vehicle, gross, tare and net | The slip matches the record the weighbridge PC made at the time of weighing |
| **NOT a genuine slip** | Something on the slip was changed after printing, or the QR was copied from another slip |
| **Check with the weighbridge now** | Tap it to ask the weighbridge PC whether this slip was cancelled later. Needs the weighbridge to be online |

## WHY YOU CAN TRUST IT

- The weights in the QR are locked at the moment of weighing. Change one digit on paper and the check no longer matches.
- The record itself is kept on the weighbridge PC, protected against alteration, and the owner can prove at any time that nothing was edited, inserted or deleted.
- A cancelled slip stays in the record as cancelled, with the name of the person who cancelled it and the approval.

## WHAT THE SLIP SHOWS

RST number · date and time · vehicle number · party · material · gross, tare and net weight · operator · record number and seal · the QR code · the weighbridge's name, address and GSTIN.

## IF THE QR DOES NOT OPEN

The weighbridge may not have SMFW Connect switched on, or your phone has no internet. Ask the operator to press **F3** and type the RST number: the record appears on the cabin PC screen.
